

THE PHONE TREE PROJECT

Hi,

You're getting this because you're one of my 10.

Here's the short version: **our taxes paid for the science, but women are still getting men's care.** And this isn't just a women's problem. It's your wife, your mother, your sister, your daughter. It's you, if you're the one sitting in that exam room.

It takes about 17 years, on average, for new medical research to make it into everyday practice. That means the science in your doctor's office may be a generation old. And when old science doesn't fit your body, guess who gets called the problem? Your nerves. Your age. Your weight. If you've ever walked out of an appointment feeling like you were losing your mind, you're not the only one.

Read the article that came with this letter. It's sourced, so check it yourself.

We tried sharing this online and got shut down. Fine. **You can hush a post. You can't hush people.** The internet shouldn't decide what's important to you. So we're doing it the way people always have when it really counts: one person to another, hand to hand.

Seventeen years is too long to wait. Here's what we're asking:

1. **Listen in.** Rebel Logic Radio is free at rebellogicradio.com. Good music and honest talk.
2. **Read the facts.** Free booklets and sourced facts at thebroadsidenews.com.
3. **Pull up a chair.** At thereasonrebellion.com/tavern, the regulars gather, talk and look out for each other. There's a seat waiting.
4. **Pick your 10.** The ones you'd never forgive yourself for not telling. Copy this letter and the article and put them in their hands. Not a text. Not a post. Hand to hand.

Phone trees usually die out in a generation or two. We're putting a mission fire under this one.

Pass it on.
